Delta Controls Somfy™ Shades Gateway

Description

The Delta Controls Somfy Shades Gateway allows certain Somfy motorized window covering products to integrate with the Delta Controls building automation system.

The integrated solution consists of a Delta Controls controller with Delta Controls' gateway firmware that supports the SDN (Somfy Digital Network) protocol, and a RS-485 network that connects to a compatible Somfy product with a ST30 motor.

Application

The Delta Controls Somfy Shades Gateway allows the integration of shade control as a component of a building automation system's control strategy to reduce heat and cool loads.

In addition to reducing energy consumption, shades provide an extra level of security during unoccupied hours.

The exterior façade is a large part of a building's appearance. With integrated Somfy shades the intended design look can be maintained by setting all shades to a common position.

Features

- ▶ Supports Somfy ST30 RS-485 motors
- ▶ 1 shade per Somfy Digital Network (or per controller)
- ▶ 15 preset positions per shade
- ▶ Compatible with Delta Controls' enteliBUS®, DAC and DSC controllers

enteliBUS is a registered trademark of Delta Controls Inc.
